Rezuanur Rahman Dip

Analytics Engineer | Data Scientist
Address: Dhaka, Bangladesh **|Phone:** +8801787618764 **|Email:** rezuanur99@gmail.com
Linked In: linkedin.com/in/rezuanur-rahman-dip | **GitHub:** github.com/rezuanurdip | **Portfolio:** rezuanurdip.github.io

Objective

Data and AI professional with 4+ years of experience turning raw data into actionable insights, predictions, and business value. Skilled across data engineering, machine learning, LLM-based solutions, and data storytelling, with hands-on expertise in big data platforms and automation. Published in global ML journals and recognized with top-tier performance ratings and corporate awards, bringing a strong passion for creating impactful, innovative solutions in data and AI.

Skills

Programming Language: Python, SQL, HTML, C
Data Engineering: PLSQL, Apache Spark, Airflow, Bash
Databases: Oracle, PostgreSQL. RDMS (ACID), Distributed Systems (BASE)
Machine Learning Libraries: Scikit-learn, XGBoost, Pandas, SparkML, YOLO, Geopandas
Data Visualization and Analysis: Tableau, Folium, Seaborn, Matplotlib, Excel
DevOps & Cloud: AWS (S3, EC2, SageMaker, Bedrock), GitHub.
Soft Skills: Problem-Solving, Cross-Functional Collaboration, Agile Methodologies, Leadership

Professional Experience

Robi Axiata Limited, Dhaka, Bangladesh
Manager, **AI and Data Science – Geo Analytics** | Sep, 2026 – Present

- Designed dual objective (Incremental Coverage & Profitability) site selection algorithm with multi-stage scoring and spacing constraint optimization for national network expansion supporting 2026 network deployment – increases site selection efficiency by ~20% over previous method.
- Developed a statistical model in 548 markets with 2 brands to separate true subscriber growth from unretained poor-quality acquisitions. Built an explainable model to detect oversaturated markets and allow management to redirect acquisition volume to more retained markets — reinforcing the dual brand strategy.
- Built an end-to-end framework to analyze non-profitable sites and suggest profitability-oriented strategies, including recommending optimal customer acquisition locations by jointly analyzing competitor presence and untapped acquisition headroom.
- Conducted hypothesis testing for brand preference for our two-brand strategy through inferential statistics across all thanas taking into account frequency, intensity, and direction, where results were used to set targets for customer acquisitions for the field force.
- Strategic analytics combining geospatial intelligence and operational data to support future expansion and automation investments, enabling informed decisions on infrastructure planning and workforce deployment.
- Played a pivotal role in stakeholder management, transforming business problems into AI solutions as the company adopted an AI-first strategy.

Associate Manager, **AI and Data Science** | Aug, 2025 – Aug, 2026

- Enhanced grid-based data using proper spatial analyses such as proximity analysis, clustering, and geometric transformations in order to identify potential locations and convert raw spatial information into explicit directions for the field force.
- Implemented Deep Learning based image detection and classification for enhanced monitoring and visibility of field trades, identification of campaign-wise poster tagging, and brand visibility through retail stores.
- Developed a cost-efficient geolocation enrichment algorithm leveraging Google Maps' $300 free tier with adaptive auto-gridding and pagination, identifying 120K+ schools and 500K+ POIs to enhance sales planning and execution.
- Enhanced the company's geo data portfolio by integrating data from various open-source, subscription, and internal data sources into a single warehouse for analytics purposes.
- Developed an LLM-based application leveraging embeddings to automate VOC responses with **80%** accuracy, processing **3K+** feedbacks daily and reducing communication time from 72 hours to 1 day while lowering costs.
- Collaborated with the Operations Team to operationalize and integrate AI solutions into business platforms.

Senior Associate, Strategic Analytics and AI Planning | Jan, 2022 – Jul, 2025

- Completed the development and operationalization of **Customer360** for **50M+** users by integrating **18** data sources (Hadoop, Oracle, PySpark), enabling **300+** daily KPIs for campaigns, analytics, AI use cases, and reporting, and migrated workflows to Airflow for streamlined orchestration.
- Developed and maintained datamarts from prob-based sources (DNA) processing **100M+** daily session records for **43M** customers, enabling customer personas, digital usage insights, and discovery of new app hosts.
- Integrated Adjust app attribution data for **5M+** users' session-level records daily and built brand-driven use cases—ad source quality analysis, frequent segmenting, silent user tracking, Wi-Fi/multi-SIM detection, and user journey funneling—to optimize digital marketing strategy.
- Redesigned data pipelines and reporting for Corporate and SME businesses by integrating **3** new sources beyond BSS (leads, targets, other revenue streams) with enriched account-level data, delivering unified dashboards for KAMs and CXOs to drive strategic decisions and efficiency.
- Develop and execute long & short-term data product strategies, road map to increase revenue, usage and market share.
- Automated reporting and developed and optimized regular data pipelines from source systems to BI platforms.

Awards

- **Top 5%** in Division in **2024-2025** and **2022-2023** performance evaluation
- Start Performer Award, Corporate Strategy for Q1-2026, Q3-2024, Q4-2023, Q3-2023
- Emerging Star Award, Corporate Strategy for Q3-2022
- Best Analytics Team, Axiata Group 2022

Education

Islamic University of Technology, OIC

BSC in Electrical and Electronic Engineering
Class of 2021
Achieved 3.54 CGPA and published in one **Q2 journal** and 2 **IEEE conferences**.

Open-Source Contribution

- **Semantic-Sense (Python)**: Built an open-source hybrid anomaly-detection library for tabular data that combines semantic embeddings of categorical/text features with numeric signals to flag outliers; recognizes relationships (e.g., "bread" is closer to "sandwich" than to "meat").

Additional Projects

- **GenAI BI Assistant (Hackathon, Axiata AWS):** Built a **GenAI + RAG** analytics system that turns natural-language business questions into SQL, executes on live data, and returns a narrative summary + brief analysis. Stack: AWS Bedrock (Claude 3 Sonnet), Titan Text Embeddings V2, FAISS, LangChain, Flask. (Presented at Axiata AWS GenAI Hackathon)
- **Datathon 2.0 — Official Website (HTML, CSS, JavaScript):** Built and launched the official website for the largest data competition in Bangladesh; delivered **5k+** registrations.

Publications

- **Comparative Analysis of Different Machine Learning Algorithms In Predicting Cardiovascular Diseases.**
  -Engineering Letters Journal (Impact Quartile-Q2)
- **Computer Aided Diagnosis of Thyroid Disease Using Machine Learning Algorithms.**
  -11th International Conference on Electrical and Computer Engineering (ICECE 2020)
- **Performance Investigation of Different Boosting Algorithms in Predicting Chronic Kidney Disease**
  - 2nd International Conference on Sustainable Technologies for Industry 4.0

Certifications

- **IBM Data Science**
  Group of 10 Courses offered by IBM- Coursera.
- **SQL (Advanced) & Gold Badge**
  Hackerrank
- **Business Statistics and Analysis Specialization**
  Group of 5 Courses offered by Rice University- Coursera
